Product Description

0.75 Liter Slip-lid Tea-Coffee Tin Box LA
0.75 Liter Slip-lid Tea-Coffee Tin Box LA is a 750 ml metal packaging option for tea, coffee and other suitable dry products. Kontensan offers this product within Tea, Coffee and Hot Flavors under Industrial and Chemical Tin Cans, Pails, and Drums. The LA mold family datasheet covers capacities from 0.3 to 2.2 liters. Within this family, the finished 0.75-liter L987 model is 118 mm high and made with 0.24 mm sheet metal. Its inner and outer surfaces have gold lacquer, and it uses a slip-on lid. The body has a mechanically joined seam. No handle, hinge, seam coating or additional decorative rib is listed for this finished model.

Dimensions and Capacity of the 750 ml Tea-Coffee Metal Box

The general LA mold family specifications give a diameter of 99 mm and a height field of 38 mm. However, the finished L987 model with a 750 ml capacity is 118 mm high. These height entries describe different levels of specification; the 38 mm family value must not be shown as the finished height of L987. The wider family allows metal thicknesses of 0.22 mm, 0.24 mm and 0.25 mm. L987 itself uses 0.24 mm sheet metal. When selecting a tea or coffee box, a volume of 0.75 liters must not be confused with 750 grams of product. Loose tea leaves, ground coffee and coffee beans have different bulk densities. The correct net weight should therefore be confirmed through tests using the actual filling product. Shipping cartons and shelf layouts should use verified finished dimensions.

Mechanically Joined Body and Gold-Lacquered Slip-On Lid

The L987 model is specified with gold lacquer on its inner and outer surfaces, a slip-on lid and a mechanically joined body. No hinge or handle is listed, and the finished model has no separate seam coating or extra decorative rib. The wider LA family also lists aluminum easy-open lids and open-top delivery among its general closure options. These must not be described as standard features of L987. Similarly, clear lacquer, silver lacquer, pigment finishes and enamel are family-level coating possibilities; the documented L987 finish is gold lacquer. Before buying a mechanically joined tea or coffee container, confirm that the inner coating is suitable for contact with the intended food. A slip-on lid alone does not guarantee airtightness, a moisture barrier or aroma retention. Required performance must be checked with appropriate tests.

Wholesale 750 ml Tea-Coffee Boxes and Custom Printing

When sourcing 750 ml metal tea and coffee boxes in bulk, assess finished dimensions, lid operation, coating and branded appearance together. Kontensan has manufactured metal packaging since 1980. Its plants in Konya and Istanbul provide a total of 25,000 square meters of indoor production space and metal offset printing equipment. The company exports to more than 30 countries. As the LA family lists offset printed exterior finishes, requests for custom printed tea and coffee boxes can be reviewed for technical suitability. However, this does not mean L987 comes with printing by default. Before ordering, specify the target net weight, artwork, required coating, lid function and quantity. Food-contact suitability and protection performance also need confirmation for the selected packaging configuration.

Frequently Asked Questions - FAQ

What is the finished height of the 0.75-liter tea-coffee box?

The finished L987 model is 118 mm high. The general LA family value of 38 mm is not the finished L987 height.

Which lid and surface finish does the 750 ml box use?

L987 has a slip-on lid, a mechanically joined body, 0.24 mm sheet metal and gold lacquer on both surfaces.

Is this the same as the side-seamed version?

No. L987 has a mechanically joined body. A different LA product may have a side-seamed body and easy-open lid; those specifications must not be assigned to L987.
