Product Description

1.5 Liter Agrochemical, Liquid Fertilizer & Seed Tin Can MA
1.5 Liter Agrochemical, Liquid Fertilizer & Seed Tin Can MA is a lock-seamed metal package developed for agricultural products. Manufactured by Kontensan, it belongs to the Industrial and Chemical Tin Cans, Pails, and Drums main category and the Agrochemical, Liquid Fertilizer & Seed Tin Cans subcategory. Its 1.5-liter capacity and slip lid option allow it to be configured for different agricultural packaging needs.
Technical design of the lock-seamed agricultural container
The mold family has a diameter of 105 mm and supports production in volumes from 0.3 to 2.3 liters. Metal thickness options include 0.22, 0.24, 0.25 and 0.28 mm. The lock-seamed structure has a body without a handle or reinforcing bead. Slip lid and open-top production options are available. The 1.5-liter example, reference L572, has a height of 180 mm. Final production specifications are confirmed when ordering.
Coating selection for seed and agricultural product packaging
Internal coatings for agricultural metal packaging should be selected according to the physical and chemical properties of the contents. Options such as Gold, clear, pigment, double lacquer and cream enamel allow different surface requirements to be evaluated. For seed packaging, moisture and storage conditions should be considered. For agrochemical or liquid fertilizer applications, the leak resistance and chemical compatibility of the lock-seamed body and slip lid, as well as relevant transport requirements, must be confirmed separately. Suitability for liquids should not be assumed without this verification.
Custom metal agricultural packaging for brands
Exterior options include offset printing, enamel and different lacquers. Kontensan combines its metal packaging experience since 1980 with manufacturing and printing facilities in Konya and Istanbul. Custom designs help display product information and required warnings clearly on the packaging. Closure, surface coating and printing specifications are evaluated together to determine the configuration for each order.
Frequently Asked Questions - FAQ
Does the 1.5-liter agricultural container have a lock-seamed body?
Yes. It features a lock-seamed body. Usage requirements for this structure, which differs from welded models, should be evaluated separately.
Which closures are available for the agricultural container?
Slip lid and open-top production options are available. Closure selection depends on filling and usage conditions.
Is the lock-seamed metal container suitable for liquid fertilizers?
Suitability cannot be assumed. Leak resistance, chemical compatibility and transport conditions must be confirmed before making a decision.
