Product Description

0.5 Liter Agrochemical, Liquid Fertilizer & Seed Tin Can JA
0.5 Liter Agrochemical, Liquid Fertilizer & Seed Tin Can JA is a metal package with a nominal capacity of 500 ml and a body diameter of 65 mm, developed for small volumes of agricultural products. Manufactured by Kontensan, it belongs to the Industrial and Chemical Tin Cans, Pails, and Drums main category and the Agrochemical, Liquid Fertilizer & Seed Tin Cans subcategory. Its narrow body and aluminum easy-open lid option support product-specific packaging design.
Body and closure features of the 500 ml agricultural container
The mold family has a diameter of 65 mm and supports volumes from 100 to 700 ml and heights from 36 to 224 mm. Metal thickness options for the seamed body include 0.22, 0.24 and 0.25 mm. The design has no handle, reinforcing bead or separate filling hole. An aluminum easy-open lid or open-top delivery can be considered. The exact height and metal thickness of the 500 ml model are confirmed through the technical configuration for each order.
Surface coatings for agrochemical and seed packaging
Compatibility between the internal surface and the contents is a critical requirement when selecting agricultural metal packaging. Options include Gold, Silver, pigment, clear and double lacquer, together with different internal and external seam coatings. For seed packaging, moisture and storage conditions should be considered. For agrochemical and liquid fertilizer packaging, chemical compatibility, closure performance and leak resistance must be evaluated. Suitability for liquids and relevant transport requirements must be confirmed before filling.
Custom printing for narrow metal packaging
On small packaging surfaces, the readability of the product name, brand identity and required usage warnings is a priority. Exterior options include enamel, different lacquers and metal offset printing. Kontensan combines its metal packaging experience since 1980 with production and printing facilities in Konya and Istanbul. Print area, filling line and closure selection are evaluated together during packaging design. This allows technical product requirements and brand communication to be addressed within the same production plan.
Frequently Asked Questions - FAQ
What is the diameter of the 500 ml agricultural container?
The body diameter is 65 mm. The exact height must be confirmed with the production configuration for the 500 ml model.
Which closure is used for the agricultural container?
An aluminum easy-open lid is available. Open-top delivery is also an option.
Can agricultural metal packaging be custom printed?
Yes. Metal offset printing and different exterior coatings are available. The final design is confirmed before production.
