Product Description

19 Liter UN Tin Pail YB

19 Liter UN Tin Pail YB is a seamed metal pail designed for industrial paint and chemical packaging. Offered by Kontensan, it belongs to the Industrial and Chemical Tin Cans, Pails, and Drums main category and the UN Certified Packaging subcategory. Its nominal capacity of 19 liters, pail handle and different body options allow it to be configured according to industrial filling requirements. The valid UN approval scope of the configuration intended for dangerous goods transport must be verified separately.

Technical features of the 19-liter UN metal pail

The mold family has a diameter of 270 mm and supports volumes from 8 to 26 liters. Metal thickness options for the seamed body include 0.28, 0.30, 0.32 and 0.38 mm. Single and double reinforcing bead options are available. The design has no separate filling hole and can feature a pail handle. The exact height, metal thickness and bead design of the 19-liter model are determined through the technical configuration for each order.

Lid and internal coating selection for paint pails

Formed and unformed pail lid options are evaluated according to product filling and closing requirements. Internal coating options include Gold, Silver, pigment, clear and double lacquer. Internal and external lacquer applications on the weld seam can also be considered. For paint and chemical packaging, coating compatibility, lid performance and transport conditions must be considered together. Not every combination of lid, body thickness or coating should be assumed to have the same UN approval.

Custom printing for industrial metal pails

Enamel, exterior lacquer and metal offset printing options allow the pail to reflect brand identity. Kontensan combines its metal packaging experience since 1980 with production and printing facilities in Konya and Istanbul. Product information, usage warnings and required transport markings must remain readable within the print area. Packaging specifications and relevant approval documents must be confirmed before ordering.

Frequently Asked Questions - FAQ

What is the diameter of the 19-liter UN pail?

The mold diameter is 270 mm. The exact product height must be confirmed for the 19-liter production configuration.

Which lids are available for metal paint pails?

Formed and unformed pail lids are available. Selection depends on filling and closing requirements.

Is a UN metal pail suitable for every chemical?

No. Chemical compatibility, substance classification and valid packaging approval must be considered together.
