Product Description

5 Liter Agrochemical, Liquid Fertilizer & Seed Tin Pail PA

5 Liter Agrochemical, Liquid Fertilizer & Seed Tin Pail PA is a five-liter metal pail designed for agricultural packaging. Offered by Kontensan, it belongs to the Industrial and Chemical Tin Cans, Pails, and Drums main category and the Agrochemical, Liquid Fertilizer & Seed Tin Cans subcategory. Coating, closure and body options are evaluated according to the properties of the intended contents.

Technical features of the five-liter agricultural pail

The PA mold family has a diameter of 175 mm and supports production in volumes from 0.9 to 7 liters. Metal thicknesses of 0.24, 0.25 and 0.28 mm can be considered for the five-liter agricultural pail. The L656 alternative listed in the technical datasheet has a height of 235 mm, a metal thickness of 0.24 mm and a Gold lacquer internal coating. This alternative is listed without an external coating or handle.

Coating selection for agrochemical and liquid fertilizer packaging

When choosing agricultural metal packaging, compatibility between the internal surface and the product formulation is essential. The PA mold family offers internal coating alternatives such as Gold, clear, pigment and double lacquer. Exterior options include enamel, various lacquers and offset printing. Before filling with agrochemicals or liquid fertilizers, chemical compatibility must be confirmed and the packaging configuration must suit the intended use and transport conditions.

Custom metal pail manufacturing for agriculture

A lid without a filling hole, a pail handle and a body with a single reinforcing bead are available design options listed in the technical datasheet. Not every order necessarily includes all these features. Kontensan combines its metal packaging experience since 1980 with production and offset printing facilities in Konya and Istanbul. Custom printing helps present product identity and usage information clearly on the packaging.

Frequently Asked Questions - FAQ

What products is the five-liter agricultural pail suitable for?

It can be considered for agrochemical, liquid fertilizer and seed packaging. Final suitability depends on the product formulation and selected packaging features.

Can the internal coating of the metal pail be changed?

Yes. The technical datasheet lists several lacquer options. The internal coating should be selected after confirming compatibility with the intended contents.

Can agricultural pails be custom printed?

Yes. Metal offset printing is an available exterior option. The print design and technical configuration are confirmed before ordering.
