Product Description

1.2 Liter Halva Tin Box LA

1.2 Liter Halva Tin Box LA is a product name within the LA metal packaging mold family, considered for different halva filling volumes. Kontensan offers this range under Halva, Tahini, Molasses and Jam Tin Cans, and Pails within Food Tin & Metal Packaging. Buyers comparing halva tin manufacturers should consider nominal capacity, finished body height, metal thickness, inner lacquer and lid type together. The LA mold capacity range includes 1.2 liters. However, the finished product described in detail in the supplied datasheet is the 500 ml L134 halva box. The confirmed dimensions and finishes of L134 must not be presented as the exact technical specifications of a finished 1.2-liter container. This distinction is important when requesting quotations or choosing equipment.

LA Mold Dimensions for Halva Metal Boxes

The LA mold family lists a diameter of 99 mm, a reference height of 38 mm and a capacity range from 0.3 to 2.2 liters. Available sheet metal thicknesses are 0.22 mm, 0.24 mm and 0.25 mm. These are different production options, not proof that every finished container uses the same material thickness. The finished-product entry identifies L134 as a 500 ml box with a height of 66 mm and 0.24 mm sheet metal. The mold's 38 mm reference height cannot replace L134's 66 mm finished height. If a buyer needs a 1.2-liter halva tin, the actual finished product code, height and metal thickness must be confirmed separately with the manufacturer. Filling machines and shipping cartons should be planned around verified final dimensions.

Welded Side Seam, Gold Lacquer and Decorative Rib

L134 has gold lacquer on both its inner and outer surfaces. It uses a welded side-seam body, a slip-on lid and a decorative rib. Its finished-product record does not list a separate opening, carrying handle or seam coating. The wider LA mold family includes other inner and outer lacquer options and alternative seam coatings, but not all are standard on L134. When selecting empty halva tins, buyers should verify that the food-contact coating suits the halva's oil content, filling temperature and storage conditions. Decorative ribbing may support the visual design, but it does not by itself guarantee leak resistance or food safety. The slip-on lid should also be evaluated for filling, retail display and shipping conditions.

Wholesale Halva Boxes and Branded Packaging

When comparing suppliers of empty metal halva boxes, buyers should use a consistent technical specification. The confirmed L134 features are 500 ml capacity, 66 mm finished height, 0.24 mm sheet metal, gold-lacquered surfaces, a slip-on lid, a welded side seam and decorative ribbing. Kontensan's metal offset printing facilities may support branded packaging in suitable configurations, but custom printing is not a confirmed standard feature of L134. A business ordering a finished 1.2-liter container should check whether that exact variant is available and confirm its specifications. The shared packaging category does not prove that the same box is suitable for tahini, molasses or jam. Food-contact compatibility, ingredients and filling requirements need separate assessment for each product.

Frequently Asked Questions - FAQ

Is a finished 1.2-liter LA halva box confirmed?

The LA mold family covers 0.3 to 2.2 liters, but the detailed finished product is the 500 ml L134. Exact 1.2-liter dimensions require separate confirmation.

What are the capacity and finished height of L134?

L134 holds 500 ml, measures 66 mm high and uses 0.24 mm sheet metal.

Does L134 have a slip-on lid and decorative rib?

Yes. L134 has a slip-on lid, a welded side-seam body and decorative ribbing. Both surfaces have gold lacquer.
