Product Description

8 Liter UN Tin Can WA
8 Liter UN Tin Can WA is a seamed metal package with a nominal capacity of eight liters, developed for industrial chemical products. Offered by Kontensan, it belongs to the Industrial and Chemical Tin Cans, Pails, and Drums main category and the UN Certified Packaging subcategory. Its 213 mm body diameter and 42 mm filling opening allow different packaging configurations to be considered for filling processes. The scope of valid product approval for dangerous goods transport must be verified separately.
Technical features of the eight-liter UN metal container
The mold family has a diameter of 213 mm and supports volumes from 5 to 11 liters. Metal thickness options for the seamed body are 0.24 and 0.28 mm. A plastic handle can be fitted; the body has no special form or reinforcing bead. Blue, green, white, red, black and orange are available options for handle and closure colors. The exact height and metal thickness of the eight-liter product must be confirmed through the technical configuration for each order.
42 mm closure and coating options for chemical packaging
The product family offers a Pratik 42 mm closure, vented and textured closure options, a Pratik 43 mm screw closure and a 42 mm metal plug. Internal coatings such as Gold, Silver, clear, pigment and double lacquer, together with different seam coatings, can be applied. Chemical compatibility, leak resistance and closing performance must be confirmed according to the properties of the contents. Not every closure and body combination should be assumed to have the same UN approval.
Custom printing and manufacturing for industrial metal containers
Enamel, exterior lacquer and metal offset printing options allow packaging to reflect brand identity. Kontensan combines its metal packaging experience since 1980 with manufacturing and printing facilities in Konya and Istanbul. Product information and required transport markings must remain readable in the print design. Technical specifications and valid approval documents must be checked before ordering.
Frequently Asked Questions - FAQ
What is the diameter of the eight-liter UN metal container?
The mold diameter is 213 mm. The exact product height must be confirmed for the eight-liter production configuration.
Is a vented closure available for the UN metal container?
Yes, a Pratik 42 mm vented closure is a production option. The relevant approval scope must be checked separately.
Is the metal container suitable for every chemical product?
No. Chemical compatibility, substance classification, closure performance and valid packaging approval must be considered together.
