Product Description

1.2 Liter Slip-lid Halva Tin Box JD

1.2 Liter Slip-lid Halva Tin Box JD is a product name associated with the JD mold family used for halva packaging. Kontensan offers metal packaging within Halva, Tahini, Molasses and Jam Tin Cans, and Pails under Food Tin & Metal Packaging. When buying folded-seam halva boxes, buyers need to check more than the requested volume. The finished size, slip-on lid and internal coating also matter. The JD datasheet does not provide full specifications for a finished 1.2-liter version. For this reason, a standard height or coating for that volume should not be presented as confirmed.

Mold Dimensions of the JD Halva Tin Family

The JD mold family has a diameter and length of 120 mm, a reference height of 34 mm and a capacity range of 0.5 to 2.3 liters. Although this range includes 1.2 liters, it does not confirm the availability of a finished 1.2-liter model. The specific product listed in the datasheet is L146, a half-liter halva container with a folded-seam body. L146 holds 500 ml, measures 36 mm in finished height and uses 0.24 mm sheet metal. Buyers should not confuse the 34 mm mold reference with the finished product's 36 mm height.

Folded-Seam Body, Slip-on Lid and Gold Lacquer

The L146 version has gold lacquer on both its inner and outer surfaces. It uses a folded-seam body and a slip-on lid, with no separate opening or carrying handle. No seam coating or decorative body shaping is listed for this finished product. The wider JD mold family also lists 0.25 mm sheet metal and other inner and outer finishes. These are possible family options, not confirmed standard features of L146. Before ordering an empty halva tin, buyers should verify the filling temperature, the product's oil content, lid compatibility and food-contact suitability.

Wholesale Halva Tins and Custom Printing

Suppliers of wholesale halva tins should be compared using the same capacity, sheet thickness, lid type, lacquer finish and order quantity. Kontensan's metal offset printing facilities may support branded packaging in suitable configurations, but custom printing is not a documented standard feature of L146. Buyers requesting a 1.2-liter version should obtain written confirmation of its product code, finished height and production availability before placing an order. The box should not automatically be treated as suitable for tahini, molasses or jam. Food-contact conditions for those products require separate review.

Frequently Asked Questions - FAQ

Is a finished 1.2-liter JD container confirmed?

The mold covers 0.5 to 2.3 liters, but the datasheet does not provide a finished 1.2-liter product code or dimensions.

What are the capacity and height of the L146 halva box?

L146 holds 500 ml and has a finished height of 36 mm. The mold reference height is 34 mm.

Which lid and coating does L146 use?

L146 has a slip-on lid and gold lacquer inside and outside. No handle is listed.
