Product Description

1/4 Liter Olive Oil Tin Can JA

1/4 Liter Olive Oil Tin Can JA is a metal packaging family for smaller olive oil portions. Kontensan offers it within Olive Oil Tin Cans under Food Tin & Metal Packaging. For brands sourcing 250 ml olive oil containers, capacity alone is not enough to select a product. Finished height, inner coating, a closure that matches the filling line and destination-market requirements all matter. Different versions in the same mold family may look similar but have different technical specifications.

Dimensions and Versions of the 250 ml Olive Oil Tin

The JA mold family has a diameter of 65 mm, a reference height of 36 mm and a capacity range of 0.1 to 0.7 liters. The datasheet describes JA as a quarter-liter family and does not support a 1.4-liter product. The finished L270 version holds 250 ml and is 100 mm high. L956 also holds 250 ml but is 80 mm high. Another version, L271, holds 600 ml and measures 185 mm high. All three use 0.24 mm sheet metal, a seamed body, a 32 mm opening, a practical 32 mm closure and a green cap. None has a handle. The mold's 36 mm figure is not a finished container height.

Inner Coating Differences for Olive Oil Packaging

L270 has gold lacquer on its inner and outer surfaces. L956 has no inner coating and a silver-lacquered exterior. L271 also has gold lacquer inside and outside. Gold lacquer must therefore not be described as standard on every empty olive oil tin in the JA family. For L956, buyers should confirm food-contact suitability for their olive oil before ordering. The metal body blocks light, but secure sealing and proper storage remain important.

Wholesale Olive Oil Tins, Printing and Prices

Wholesale olive oil tin orders should specify the product code, finished height, inner coating, closure and order quantity in one document. Kontensan's offset printing facilities can support custom printed olive oil tins on suitable production configurations, but printing is not confirmed as a standard feature of L270 or L956. Empty olive oil tin prices should only be compared between equivalent specifications. Export buyers must also check labeling and food packaging rules in the destination country.

Frequently Asked Questions - FAQ

Is the JA olive oil container a 1.4-liter product?

No. The JA datasheet lists a capacity range of 0.1 to 0.7 liters. It identifies a quarter-liter family, not a 1.4-liter product.

How tall are the 250 ml JA olive oil tins?

L270 is 100 mm high, while L956 is 80 mm high. Both versions hold 250 ml.

Do both 250 ml JA containers have inner lacquer?

No. L270 has a gold-lacquered interior, while L956 lists no inner coating. Food-contact suitability should be checked separately.
