Product Description

1.5 Liter Olive Oil Tin Can EA

1.5 Liter Olive Oil Tin Can EA is a metal packaging option for producers filling olive oil in smaller volumes. Kontensan offers this model within Olive Oil Tin Cans under Food Tin & Metal Packaging. When choosing olive oil tin packaging, buyers should consider internal coating, closure compatibility with filling equipment and shipping conditions, not just capacity. Companies ordering empty olive oil tins should not confuse finished product dimensions with general measurements of the mold family.

What Are the Dimensions of the 1.5 Liter Olive Oil Tin?

The EA mold datasheet lists a diameter and length of 87 mm, a reference height of 65 mm and a capacity range from 0.5 to 2 liters. However, the finished L097 1.5-liter olive oil tin is 255 mm high. L097 uses 0.24 mm sheet metal, gold lacquer inside and outside, a seamed body and a 32 mm opening. It has a 32 mm practical closure with a green cap color and no handle. Its product record lists no seam coating or shaped reinforcement. The L288 model in the same family holds 2 liters and measures 280 mm high; those details must not be assigned to L097.

Inner Lacquer and Closure Compatibility for Olive Oil

Metal olive oil packaging reduces light exposure, but suitable closures, storage temperature and food-contact surfaces remain important for product quality. The EA family lists 0.24 and 0.25 mm metal, various lacquer finishes and vented closure options. These are not all standard on L097. Its confirmed features are a gold-lacquered inner surface and a 32 mm practical closure. Food-contact suitability should be checked against the actual oil and filling process before ordering.

Wholesale Olive Oil Tins and Custom Printing

For wholesale olive oil tins, buyers should include nominal capacity, finished height, metal thickness, lacquer, closure and quantity in the same quotation. Kontensan's metal offset printing facilities can support custom printed olive oil tins on suitable production configurations. However, printing is not a confirmed standard feature of L097. Empty olive oil tin prices are meaningful only when equivalent technical specifications are compared. Export buyers should also check the food packaging and labeling rules in their destination market.

Does a 1.5 Liter Olive Oil Tin Hold 1.5 Kilograms?

No. One and a half liters describe volume, not the oil's exact weight. Density, filling temperature and headspace affect net weight. A filling test with the actual product is needed to confirm the amount.

Frequently Asked Questions - FAQ

How tall is the 1.5-liter EA olive oil tin?

The finished L097 1.5-liter version is 255 mm high. The EA mold's 65 mm figure is a reference height.

Which closure does the 1.5-liter oil tin use?

L097 uses a 32 mm practical closure with a green cap color. No handle is listed.

Can the 1.5-liter olive oil tin be custom printed?

Offset printing can be considered for suitable versions. Printing details and food-contact conditions should be confirmed before ordering.
