Product Description

1.5 Liter Slip-lid Halva Tin Box RA

1.5 Liter Slip-lid Halva Tin Box RA is a one-and-a-half-liter metal packaging option for halva producers. Kontensan offers this model in Halva, Tahini, Molasses and Jam Tin Cans, and Pails under Food Tin & Metal Packaging. When buying empty halva tins, capacity alone is not enough. Buyers should also review the folded-seam body, slip-on lid, sheet metal thickness and food-contact coating. The L194 version within the RA family is clearly identified in the datasheet as a finished 1.5-liter product. This helps wholesale buyers separate the mold family's general options from the actual features of the container they order.

Technical Dimensions of the 1.5-Liter Halva Box

The RA mold family lists a diameter of 215 mm, a reference height of 35 mm and a capacity range from 1.2 to 8 liters. Its metal thickness options include 0.24 mm and 0.25 mm. The finished L194 halva box holds 1.5 liters, measures 36 mm high and uses 0.24 mm sheet metal. This distinction matters: the 35 mm mold reference must not replace the finished product's 36 mm height. Filling-line setup, stacking and shipping plans should use the actual finished product dimensions. Metal halva boxes with similar capacities may use different mold families or closures, so buyers should not compare them by volume alone.

Gold-Lacquered Surfaces and Slip-on Lid

L194 has gold lacquer on both its inner and outer surfaces. The body has a folded seam, and the container closes with a slip-on lid. The finished version does not list a separate opening, carrying handle, seam coating or decorative ribbing. Although the wider RA mold family includes decorative ribs and alternative surface finishes, these are not standard features confirmed for L194. When selecting packaging for halva, buyers should consider the product's oil content, filling temperature and expected shelf life. They should confirm that the inner lacquer is suitable for food contact. Slip-on lid performance should also be checked against handling and storage conditions before placing an order.

Wholesale Halva Tins and Branded Metal Packaging

To compare halva tin manufacturers accurately, buyers should request quotations based on the L194 code, 1.5-liter capacity, 0.24 mm metal, gold lacquer inside and outside, and a slip-on lid. Kontensan's metal offset printing facilities may support custom branded packaging in suitable production configurations. However, custom printing is not a confirmed standard feature of L194. Businesses sourcing empty metal halva tins should also confirm print requirements, order quantities and delivery terms. Suitability for other foods such as tahini, molasses or jam cannot be assumed from the category name alone. Food-contact and filling conditions must be checked separately for each product.

Frequently Asked Questions - FAQ

What is the finished height of the 1.5-liter RA halva box?

The finished L194 model is 36 mm high. The RA mold family's 35 mm figure is a reference height.

Which closure and coating does L194 use?

L194 has a slip-on lid, a folded-seam body and gold lacquer inside and outside.

Does L194 have a carrying handle or decorative rib?

No. The finished L194 product record lists neither a carrying handle nor decorative ribbing.
