1 Liter Halva Tin Box AK

AK

Technical Specifications

Mold Code	AK
Diameter	114
Length	188
Height	41
Volume	0.8 - 2.6 lt

Applicable Features

Kalınlık

0,22 mm · 0,24 mm · 0,25 mm

İç Kaplama

Silverlaklı · Gold Laklı · Puntalık Laklı · Çift Laklı · Pigment Laklı · Pigment Lak+Laklı · Çift Pigment Laklı · Krem Emaye Laklı · Bej Laklı · Şeffaf Laklı · Krem Laklı · Dekoratif Gold Laklı · Gri Laklı · Yok

Dış Kaplama

Silverlaklı · Gold Laklı · Emaye · Çift Laklı · Ofset Baskılı · Şeffaf Laklı · Dekoratif Gold Laklı · Yok

Delik

Yok

Kapak

Geçme Kapak

Kulp / Menteşe

Product Description

1 Liter Halva Tin Box AK

1 Liter Halva Tin Box AK is a metal packaging option in the AK mold family for halva producers. Kontensan offers this range within Halva, Tahini, Molasses and Jam Tin Cans, and Pails under Food Tin & Metal Packaging. When ordering wholesale halva boxes, buyers should check nominal capacity, finished height, metal thickness and the closure system together. Although the AK family carries a one-liter product name, the finished version described in the datasheet is L437, with a capacity of 800 ml. The exact dimensions of a finished one-liter version cannot be confirmed from this example alone.

Dimensions and Capacity Options of the AK Mold Family

The AK mold datasheet lists a diameter of 114 mm, a length of 188 mm and a reference height of 41 mm. Its capacity range is 0.8 to 2.6 liters. The family supports sheet metal thickness options of 0.22 mm, 0.24 mm and 0.25 mm. However, these family-wide measurements and options are not standard specifications for every finished model. The documented L437 halva container holds 800 ml, has a finished height of 40 mm and uses 0.24 mm sheet metal. Production and filling-line planning should not confuse the 41 mm mold reference with the finished product's 40 mm height.

Gold Lacquer and Slip-on Lid on the 800 ml Halva Box

L437 has gold lacquer on both its inner and outer surfaces. The body uses a folded seam and the container closes with a slip-on lid. The finished-product record lists no separate opening, carrying handle, seam coating, decorative ribbing or other body shaping. The AK family also allows other inner and outer lacquer finishes and offset printing options, but these are not all standard features of L437. Before choosing an empty halva tin, buyers should confirm food-contact suitability based on the product's oil content, filling temperature and storage conditions. Suitability for tahini, molasses or jam requires separate confirmation.

Wholesale Halva Tins and Branded Packaging

When comparing manufacturers of wholesale halva containers, buyers should use the same technical requirements for capacity, finished height, metal thickness, inner lacquer, lid and order quantity. Kontensan's metal offset printing facilities may support branded metal packaging in suitable production configurations, but custom printing is not a confirmed standard feature of L437. If a buyer requests a finished one-liter container, its product code and exact dimensions must be verified separately. This prevents the documented 800 ml model from being mistaken for a one-liter version and supports more accurate quotations and purchasing decisions.

Frequently Asked Questions - FAQ

Is a finished one-liter AK halva box confirmed in the datasheet?

The mold range is 0.8 to 2.6 liters, but the documented finished product is the 800 ml L437 version. One-liter specifications need separate confirmation.

What are the capacity and height of L437?

L437 holds 800 ml and has a finished height of 40 mm. The 41 mm value is the mold family's reference height.

Which coating and closure are used on L437?

L437 has gold lacquer inside and outside, a folded-seam body and a slip-on lid. No carrying handle is listed.
