# 1 Liter Halva Tin Box CJ

CJ

## Technical Specifications

| | |
|---|---|
| Mold Code | CJ |
| Diameter | 140 |
| Length | 240 |
| Height | 36 |
| Volume | 1 - 3.3 lt |

## Applicable Features

**Kalınlık**

0,24 mm · 0,25 mm

**İç Kaplama**

Silverlaklı · Gold Laklı · Puntalık Laklı · Çift Laklı · Pigment Laklı · Pigment Lak+Laklı · Çift Pigment Laklı · Krem Emaye Laklı · Bej Laklı · Şeffaf Laklı · Krem Laklı · Dekoratif Gold Laklı · Gri Laklı · Yok

**Dış Kaplama**

Silverlaklı · Gold Laklı · Emaye · Çift Laklı · Ofset Baskılı · Şeffaf Laklı · Dekoratif Gold Laklı · Yok

**Delik**

Yok

**Kapak**

Geçme Kapak

**Kulp / Menteşe**

Yok

**39**

Yok

**Dikiş/Kenet**

Kenetli

**Dikiş Kaplama**

Yok

**Forma / Kordon**

Yok

## Product Description

1 Liter Halva Tin Box CJ

1 Liter Halva Tin Box CJ is a packaging option from the CJ mold family for producers selling halva in one-liter metal containers. Kontensan offers it within Halva, Tahini, Molasses and Jam Tin Cans, and Pails under Food Tin & Metal Packaging. When choosing an empty halva box, buyers should consider more than its volume. The container's horizontal dimensions, folded-seam body, lid design and inner coating all matter. The finished L260 version in the CJ family has clearly listed product specifications. This helps wholesale buyers avoid confusing general mold options with the features of the actual container they order.

Technical Dimensions of the One-Liter Halva Container

The CJ mold datasheet lists a diameter of 140 mm, a length of 240 mm and a reference height of 36 mm. Its capacity range is 1 to 3.3 liters. The finished L260 halva container holds one liter, has a height of 36 mm and uses 0.24 mm sheet metal. Gold lacquer covers both the inner and outer surfaces. The body has a folded seam and the closure is a slip-on lid. No separate opening, handle, seam coating or decorative body shaping is listed. Although the CJ family also includes a 0.25 mm metal option, that thickness is not a documented standard feature of L260.

Slip-on Lid, Gold Lacquer and Food Contact

The slip-on lid and folded-seam body are two confirmed structural features of L260. Its gold-lacquered interior is the surface that comes into contact with the food. Buyers should verify coating suitability using the halva's oil content, filling temperature, expected storage period and the filling line's closing method. The wider CJ mold family includes other lacquer and exterior finish options, but not all of them are standard on L260. The category name alone cannot confirm that the same container is suitable for tahini, molasses or jam. Compatibility must be checked for each food.

Wholesale Halva Tins and Custom Printing Orders

When comparing halva tin manufacturers, buyers should use the same specification for capacity, metal thickness, gold lacquer, lid type and order quantity. Kontensan's metal offset printing facilities may support branded packaging in suitable production configurations. However, custom printing is not a confirmed standard feature of L260. Price comparisons between empty metal halva tin suppliers are meaningful only when product specifications are equivalent. Export orders should also be reviewed against the food-contact and labeling requirements of the destination market before production begins.

Frequently Asked Questions - FAQ

What is the finished height of the one-liter CJ halva box?

The L260 version measures 36 mm high. The CJ mold reference is also listed as 36 mm.

Which coating and lid does L260 use?

L260 has gold lacquer inside and outside, a folded-seam body and a slip-on lid.

Does the L260 container have a handle or separate opening?

No. The datasheet lists no carrying handle or separate opening for L260.
