Product Description

1 Liter Halva Tin Box OD

1 Liter Halva Tin Box OD is a product name in the OD mold family for halva producers considering different packaging volumes. Kontensan offers this range under Halva, Tahini, Molasses and Jam Tin Cans, and Pails within Food Tin & Metal Packaging. Buyers should not choose halva packaging by nominal capacity alone. The finished height, metal thickness, body joint and lid are also important. The OD mold family includes a one-liter volume within its general range. However, the finished product described in detail in the datasheet is the 800 ml L144 halva box. Its technical specifications should not automatically be used for a finished one-liter version. This distinction helps wholesale buyers prepare accurate requests.

OD Mold Dimensions and Halva Tin Capacity

The OD mold family lists a diameter of 160 mm, a reference height of 38 mm and a capacity range from 0.7 to 5.5 liters. Its available metal thickness options include 0.24 mm and 0.25 mm. These are general options for the mold family, not proof that every finished product has the same construction. The documented L144 model holds 800 ml, has a finished height of 44 mm and uses 0.24 mm sheet metal. The 38 mm mold reference must therefore not be confused with the finished 44 mm product height. Buyers ordering a one-liter halva box should confirm the exact finished product code, height and metal thickness separately. Filling lines and shipping cartons should be planned using verified finished dimensions.

Folded-Seam Body, Gold Lacquer and Slip-on Lid

L144 has gold lacquer on both its inner and outer surfaces. It uses a folded-seam body and a slip-on lid. The finished product record lists no separate opening, carrying handle, seam coating or decorative body shaping. The OD family offers other finishes, including silver lacquer, pigment coatings and offset printing options. These options are not all confirmed standard features of L144. When choosing an empty halva tin, buyers should check that the inner coating is suitable for the food's oil content, filling temperature and expected shelf life. They should also confirm that the slip-on lid works with the planned handling, storage and transport conditions. Packaging decisions should be based on use requirements as well as appearance.

Wholesale Halva Tins and Packaging Orders

When comparing halva tin manufacturers or suppliers of empty metal halva boxes, buyers should request quotations using the same finished product specification. For L144, this includes 800 ml capacity, 44 mm height, 0.24 mm sheet metal, gold-lacquered surfaces and a slip-on lid. Kontensan's metal offset printing facilities may support branded packaging in suitable production configurations, but custom printing is not a confirmed standard feature of L144. Buyers looking for a finished one-liter box should check whether that version is available and verify its specifications separately. A shared category does not prove suitability for tahini, molasses or jam. Each food requires its own coating, filling and purchasing checks.

Frequently Asked Questions - FAQ

Are the finished dimensions of a one-liter OD halva box confirmed?

The OD family covers 0.7 to 5.5 liters, but the documented finished model is the 800 ml L144. Exact one-liter dimensions need separate confirmation.

What are the capacity and height of L144?

L144 holds 800 ml, measures 44 mm high and uses 0.24 mm sheet metal.

Which lid and coating does L144 use?

L144 has a slip-on lid, a folded-seam body and gold lacquer inside and outside. No handle or separate opening is listed.
