Product Description

1 Liter Halva Tin Box PU

1 Liter Halva Tin Box PU is a product name within the PU mold family considered for halva packaging. Kontensan offers this range in Halva, Tahini, Molasses and Jam Tin Cans, and Pails under Food Tin & Metal Packaging. When comparing halva tin manufacturers, buyers should check more than the nominal volume. The finished product code, actual height, sheet metal thickness and closure type also matter. The PU mold family's volume range includes one liter. However, the finished product described in detail in the supplied datasheet is L306, which holds 800 ml. Its confirmed features must not automatically be presented as the exact specifications of a finished one-liter container.

PU Mold Dimensions and Halva Tin Capacity Range

The PU mold family lists a diameter of 175 mm, a reference height of 36 mm and a capacity range from 0.8 to 5.8 liters. Available metal thickness options include 0.24 mm and 0.25 mm. These family-wide options do not mean that every finished box uses the same thickness. The documented L306 halva container holds 800 ml, has a finished height of 36 mm and uses 0.25 mm sheet metal. Buyers ordering wholesale one-liter halva boxes should confirm the correct finished product code, height and metal thickness separately. Filling equipment, shipping cartons and storage plans should not rely only on the general mold family figures.

Gold Lacquer and Slip-on Lid Features

L306 has gold lacquer on both its inner and outer surfaces and uses a slip-on lid. Its finished-product record does not list a separate opening, carrying handle, seam or folded joint, seam coating, or decorative body shaping. These entries describe the datasheet only and do not establish additional claims about the manufacturing process. The wider PU family offers other inner coatings, outer finishes and offset printing options, but not all are standard features of L306. When choosing an empty halva tin, buyers should confirm the inner coating's suitability for food contact based on the halva's oil content, filling temperature and expected shelf life. The slip-on lid should also suit the planned storage and transport conditions.

Empty Metal Halva Boxes and Wholesale Orders

Suppliers of empty halva tins should be compared using the same finished product specification. For L306, the quotation should clearly state 800 ml capacity, 36 mm finished height, 0.25 mm metal, gold lacquer on both surfaces and a slip-on lid. Kontensan's metal offset printing facilities may support custom branded packaging in suitable configurations, but printing is not a confirmed standard feature of L306. A buyer requesting a finished one-liter box should also verify whether that exact version is available. The shared category does not prove that this container is suitable for tahini, molasses or jam. Food-contact suitability and filling conditions must be checked separately for each product.

Frequently Asked Questions - FAQ

Are the dimensions of a finished one-liter PU halva box confirmed?

The PU family covers 0.8 to 5.8 liters, but the documented finished version is the 800 ml L306. Exact one-liter specifications need separate confirmation.

What are the capacity and height of L306?

L306 holds 800 ml, measures 36 mm high and uses 0.25 mm sheet metal.

Which lid and finish are used on L306?

L306 has a slip-on lid and gold lacquer inside and outside. No handle or separate opening is listed.
