Product Description

1 Liter Olive Oil Tin Can KA

1 Liter Olive Oil Tin Can KA is a metal packaging solution for producers selling olive oil in one-liter containers. Kontensan offers this model within Olive Oil Tin Cans under Food Tin & Metal Packaging. Choosing suitable olive oil packaging requires more than checking volume. Producers should also consider filling equipment, closure diameter, internal coating and shipping conditions. For wholesale orders of empty olive oil tins, the finished product code must be clearly distinguished from the general specifications of the mold family.

Dimensions and Features of the 1 Liter Olive Oil Tin

The KA mold datasheet lists a diameter of 83 mm, a reference height of 37 mm and a capacity range of 0.2 to 1.5 liters. However, the finished one-liter L230 model is 200 mm high. L230 uses 0.24 mm sheet metal, gold lacquer on both inner and outer surfaces, a seamed body, a 32 mm opening and a matching practical closure. Its cap is green, while no handle, seam coating or shaped reinforcement is listed. The L890 version in the same mold family holds 600 ml, measures 120 mm high and has no listed surface coating. Those features must not be assigned to the one-liter L230 version.

Why Do Closures and Inner Lacquer Matter?

Metal olive oil packaging reduces direct light exposure. However, secure sealing, hygienic filling, suitable storage temperature and food-contact compliance also help protect the product. The KA family lists 32 and 42 mm openings, practical and screw-cap alternatives, and several lacquer finishes. These are possible family configurations, not standard features of L230. Its confirmed specifications include a 32 mm practical closure and a gold-lacquered inner surface. Before production, buyers should verify filling-line compatibility and the relevant food-contact documentation.

Wholesale Olive Oil Tins, Printing and Prices

When sourcing wholesale olive oil tins, buyers should include metal thickness, finished height, closure, internal coating, printing requirements and order quantity in one quotation. Kontensan's metal offset printing facilities can support custom printed olive oil tins on suitable configurations. Custom printing, however, is not a documented standard feature of L230. Empty olive oil tin prices are meaningful only when products with equivalent specifications are compared. Export projects must also consider food packaging and labeling rules in the destination country.

Frequently Asked Questions - FAQ

How tall is the one-liter olive oil tin?

The finished L230 model is 200 mm high. The KA mold's 37 mm value is a reference measurement only.

Which closure does the one-liter container use?

L230 has a 32 mm opening, a matching practical closure and a green cap. It has no handle.

Does the one-liter olive oil tin have inner lacquer?

Yes. The L230 datasheet lists gold lacquer on both inner and outer surfaces. Food-contact suitability should be confirmed for the intended use.
