Product Description

1 Liter Olive Oil Tin Can Z5

1 Liter Olive Oil Tin Can Z5 is a metal packaging option designed for one-liter olive oil filling. Kontensan offers it within Olive Oil Tin Cans under Food Tin & Metal Packaging. When choosing olive oil tin packaging, producers should consider capacity, compatibility with their filling line, internal coating and transport conditions. Buyers of empty olive oil tins should distinguish the general mold specifications from the features of a finished container.

Technical Features of the 1 Liter Olive Oil Tin

The Z5 mold datasheet lists a diameter of 58 mm, a length of 115 mm, a reference height of 60 mm and a capacity range from 0.4 to 1.4 liters. However, the finished L588 one-liter olive oil container is 180 mm high. L588 uses 0.24 mm sheet metal, gold lacquer inside and outside, a seamed body, a 32 mm opening and a matching practical closure. Its cap color is green, and it has no handle. The inner seam has powder lacquer, while the outer seam is lacquered. The 600 ml L585 version in the same mold family is 100 mm high; that is not the height of the one-liter product.

Choosing Closures and Inner Lacquer for Olive Oil

Metal olive oil packaging blocks light and reduces direct exposure. However, suitable sealing, storage temperature and food-contact surfaces are also important for oil quality. The Z5 mold family lists 0.22, 0.24 and 0.25 mm metal, 24 or 32 mm openings and several lacquer options. These choices are not all standard on L588. Its documented features are a gold-lacquered inner surface and a 32 mm practical closure. Food-contact suitability should be confirmed for the intended filling process.

Wholesale Empty Olive Oil Tins and Custom Printing

For wholesale olive oil tins, buyers should include the product code, finished dimensions, internal coating, closure, printing and quantity in the same quotation. Kontensan's metal offset printing facilities can support custom printed olive oil tins on suitable configurations, but printing is not confirmed as a standard L588 feature. Empty olive oil tin prices should only be compared when specifications match. Export orders also require checking packaging and labeling rules in the destination market.

Does a 1 Liter Olive Oil Tin Hold 1 Kilogram?

No. One liter is a measure of volume, not a fixed weight. Oil density, filling temperature and headspace affect the net weight. Producers should confirm the filling amount through a sample test.

Frequently Asked Questions - FAQ

How tall is the one-liter Z5 olive oil tin?

The finished L588 one-liter model is 180 mm high. The 60 mm value is a mold reference height.

Which closure does the one-liter olive oil tin use?

L588 has a 32 mm practical closure with a green cap. It does not have a handle.

Can the Z5 olive oil tin be custom printed?

Metal offset printing can be considered on suitable production versions. Printing and food-contact requirements should be confirmed before ordering.
