### Delik

Yok

### Kapak

Kolay Açılır (Alüminyum) · Yok (Ağız Açık) · Geçme Kapak

### Kulp / Menteşe

Yok

### 39

Yok

### Dikiş/Kenet

Kenetli

### Dikiş Kaplama

Yok

### Forma / Kordon

Yok

## Product Description

1 L Slip Lid Tea and Coffee Tin

The 1 L Slip Lid Tea and Coffee Tin is a metal coffee tin that stands out with its Slip Lid body and easy-open aluminum lid option. With a Ø99 mm diameter and 38 mm height, it suits fill volumes ranging from 0.3 to 2.2 liters. This product belongs to the Tea,

Coffee, and Hot Flavor Tin Boxes series under Kontensan's Food Tin & Metal Packaging main category.

#### Slip Lid Body and Easy-Open Lid

The Slip Lid tea tin is a body joint without welding. This method gives a clean seam line and efficient production. The easy-open aluminum lid allows the content to be sealed airtight with a ring-pull, can-type closure; slip-on and open-mouth options are also available.

#### Why Choose a Metal Tea and Coffee Tin?

Tea and coffee lose their aroma quickly when exposed to light, moisture and oxygen. A metal tea tin protects the content with its opaque body, while the easy-open aluminum lid minimizes air contact. In this way, a metal coffee tin strongly preserves aroma and freshness.

#### Printing and Coating Options

A printed tea tin can be produced with internal and external coatings such as silver lacquer, gold lacquer, enamel and pigment lacquer. Metal offset printing applies a custom brand design to the outer surface.

#### Durability and Food Safety

The Slip Lid body and food-grade lacquer systems support durability and hygiene throughout the shelf life.

#### Kontensan Production Assurance

Kontensan supports production reliability with its quality, environmental and food safety management system certifications. With 46 years of manufacturing experience, it supplies metal tea and coffee tins from Türkiye to more than 30 countries. Production in alternative moulds, such as a 118 mm slip-on lid version, is also possible.

#### Frequently Asked Questions - FAQ

##### What is a Slip lid tin?

A Slip Lid tin has its body joined by folding rather than welding. It gives a clean seam line and efficient production and can be used with can-type lids.

##### What is the difference between Slip lid and welded (stitched) bodies?

A Slip Lid body is joined with a folded seam, while a stitched body is joined with a welded side seam. Both offer a strong structure; the choice depends on production and use preference.

##### Can this tin be sealed airtight?

Yes. When produced with the easy-open aluminum lid, the content can be sealed airtight; this protects the freshness of sensitive products such as coffee.

##### How much product fits in a 0.3–2.2 liter tin?

Capacity depends on the product's density. This range suits single-serve and medium-volume tea and coffee presentations.
