Product Description

10 Liter Paint & Thinner Tin Can CA

10 Liter Paint & Thinner Tin Can CA belongs to a metal container family for the industrial packaging needs of paint and thinner manufacturers. Kontensan offers this product in Paint & Thinner Tin Can within Industrial and Chemical Tin Cans, Pails, and Drums. The nominal ten-liter capacity is an option for filling facilities and chemical businesses seeking an alternative to larger containers. The CA family includes different sheet metal thicknesses, closure systems and surface finishes. These options allow the packaging configuration to be selected according to the chemical properties of the contents and the operating conditions of the production facility.

Dimensions and Metal Options for the 10-Liter Paint Container

The CA mold family has two horizontal reference dimensions of 198 mm, a reference height of 170 mm and a capacity range of 6–12 liters. Available sheet metal thicknesses for the welded body are 0.28 mm, 0.30 mm and 0.32 mm. No separate body shaping or ribbing is listed for the mold family. The documented alternative, L870, is a 12-liter thinner container with a finished height of 293 mm and a sheet thickness of 0.28 mm. These are not confirmed finished dimensions of the ten-liter version. When ordering empty paint tins, buyers should verify finished dimensions for filling line height, handling arrangements and pallet layouts.

Closure and Surface Finish Options for Thinner Packaging

The CA family lists opening diameters of 32, 39, 42 and 56 mm, with various practical closures, vented closures and metal plugs. The L870 model features a 42 mm opening, a Pratik 42 mm closure, a red plastic handle and an enamel exterior. It has no inner coating or separate seam coating. When selecting metal paint tins with closures, buyers should consider the composition of water-based or solvent-based products and their compatibility with the inner surface and closure material. The equipment specified for L870 should not automatically be assumed to apply to the ten-liter container. For dangerous goods transport, required packaging tests and approvals must be verified separately.

Wholesale Empty Paint Cans and Custom Printed Packaging

When comparing paint tin manufacturers, choosing the right supplier requires more than comparing unit prices. Capacity, metal thickness, closure, coating and order quantity should be evaluated against the same technical specification. Kontensan has manufactured metal packaging since 1980 and serves different industries from 25,000 square meters of indoor production space in Konya and Istanbul. Its metal offset printing facilities support custom printed paint packaging in suitable configurations. For wholesale empty metal paint tins, share your target capacity, the properties of the filling product and your brand design to request a technical assessment and quotation.

Frequently Asked Questions - FAQ

Which sheet thicknesses are available for the 10-liter paint and thinner container?

The CA mold family lists 0.28 mm, 0.30 mm and 0.32 mm options. The finished ten-liter product thickness must be confirmed in the order configuration.

What are the features of the 12-liter thinner container?

L870 features a height of 293 mm, 0.28 mm sheet metal, an enamel exterior, a Pratik 42 mm closure and a red plastic handle.

What determines empty paint tin prices?

Prices vary according to capacity, metal thickness, closure, inner and outer coatings, printing and order quantity.
