Product Description

10 Liter Paint & Thinner Tin Can Pail SA

10 Liter Paint & Thinner Tin Can Pail SA belongs to a wide-opening metal pail family for industrial paint and thinner packaging requirements. Kontensan offers this product in its Paint & Thinner Tin Can range under Industrial and Chemical Tin Cans, Pails, and Drums. The nominal ten-liter capacity can be considered in packaging plans for professional paint manufacturers and filling facilities. The SA family is specified with an unprofiled pail lid, a carrying handle and a welded body with one rib. The documented finished example in this family is the nine-liter L562 paint container.

10-Liter Metal Paint Pail: Body Design and Capacity

The SA mold family has a reference diameter of 220 mm, a reference height of 140 mm and a capacity range of 5.3–12.2 liters. Sheet metal options of 0.28 mm and 0.30 mm are specified for body production. The welded body with a single rib is a distinctive structural feature of this family. The nine-liter L562 model has a finished height of 237 mm and 0.28 mm sheet metal. These are not confirmed finished dimensions of the ten-liter version. When sourcing empty paint pails, buyers should consider actual external dimensions, filling equipment compatibility, storage arrangements and pallet layouts alongside target capacity. Container capacity is measured in liters, while filling weight depends on product density.

Unprofiled Pail Lid and Surface Coating Options

The SA family uses a pail lid rather than a separate filling opening. The L562 model is specified with an unprofiled lid, a carrying handle and a single body rib; it has no inner or outer coating or separate seam coating. Different inner lacquers, enamel, clear lacquer and offset printed exterior options can be considered within the family. When selecting metal paint tins or pails with lids, chemical composition, inner surface compatibility and closure performance are important. An example specified for paint should not automatically be considered suitable for all types of thinner. Required packaging tests and approvals for dangerous goods transport must be verified separately.

Wholesale Metal Paint Pail Manufacturing and Custom Printing

When working with metal paint container manufacturers, capacity, sheet thickness, lid, surface coating and order quantity should be evaluated against a single technical specification. Kontensan has operated in the metal packaging industry since 1980. Its 25,000 square meters of indoor production space in Konya and Istanbul and metal offset printing facilities support custom printed paint packaging and pails in suitable configurations. Printing is not listed as a standard feature of L562. For wholesale empty paint cans and pails, share your target capacity, the chemical properties of the contents, print design and order quantity with Kontensan to request a technical assessment and quotation.

Frequently Asked Questions - FAQ

Which sheet thicknesses are available for the 10-liter paint pail?

The SA mold family lists 0.28 mm and 0.30 mm options. Finished product thickness must be confirmed before ordering.

Which lid is used on the metal paint pail?

The SA family is specified with an unprofiled pail lid and a carrying handle. There is no separate filling opening.

What are the features of the 9-liter paint pail?

L562 has a finished height of 237 mm, 0.28 mm sheet metal, an unprofiled lid and a single body rib.
