Product Description

10 L Vegetable Oil Tin Pail

The 10 L vegetable oil tin pail is a compact metal package for filling, storing and distributing edible oils. Made by Kontensan, it belongs to the Food Tin & Metal Packaging category and the Vegetable Oil Tin Cans product group. Its 10-litre capacity, 262 mm

height and 220 mm SA mould diameter provide a clear solution for medium-volume filling needs.

What Does the 10 L Vegetable Oil Tin Offer?

The 0.28 mm metal body, welded seam and single reinforcing bead support the package during handling. An unformed pail lid closes the container after filling, while the pail handle improves manual transport. The technical sheet specifies gold lacquer on the inner and outer surfaces, with powder lacquer inside and lacquer outside the seam. This structure addresses both food-contact and exterior performance.

Where Can a 10 L Vegetable Oil Pail Be Used?

This 10 L oil pail may be considered for sunflower oil, olive oil and other edible oils in medium-volume sales and shipment. For buyers seeking a 10 L olive oil tin can, the metal light barrier, carrying handle and balanced capacity are clear benefits. Filling temperature, oil properties, target shelf life and destination-market food-packaging rules must still be confirmed before production.

Strong Presentation with Gold Lacquer

Gold lacquer on the inner and outer surfaces gives the package a consistent, distinctive appearance. Kontensan combines manufacturing experience since 1980 with metal offset printing capacity and project-based customisation. Businesses requiring printed olive oil tin cans can align colours, graphic areas and exterior finish with their brand identity. Technical protection, shelf visibility and wholesale supply can therefore be managed in one packaging plan.

Before ordering, buyers should review annual demand, filling line, closing method, pallet layout and print requirements together. This helps select the right product configuration and reduces unnecessary changes later.

Frequently Asked Questions - FAQ

How much oil does the 10 L vegetable oil tin hold?

Its nominal capacity is 10 litres. The net fill quantity depends on oil density, filling temperature, required headspace and the producer's filling standard.

Can this product be used as an olive oil tin can?

Yes, but the food-contact surface, coating need and destination-market packaging rules must be technically confirmed before filling.

Can the pail be produced with printing?

Metal offset printing and different exterior finishes may be evaluated under suitable project and order conditions. Print scope, colours and minimum order requirements are confirmed during quotation.

Does the product include a carrying handle?

Yes. The technical sheet specifies a pail handle, which supports controlled manual handling of the 10-litre package.
