18 Liter Halva, Tahini, Molasses and Jam Tin Pails AA

AA

Technical Specifications

Mold Code	AA
Diameter	232
Length	232
Height	85
Volume	4.5 - 21 lt

Applicable Features

Kalınlık

0,28 mm · 0,30 mm · 0,32 mm

İç Kaplama

Silverlaklı · Gold Laklı · Puntalık Laklı · Çift Laklı · Pigment Laklı · Pigment Lak+Laklı · Çift Pigment Laklı · Krem Emaye Laklı · Bej Laklı · Şeffaf Laklı · Krem Laklı · Dekoratif Gold Laklı · Gri Laklı · Yok

Dış Kaplama

Silverlaklı · Gold Laklı · Emaye · Çift Laklı · Ofset Baskılı · Şeffaf Laklı · Dekoratif Gold Laklı · Yok

Delik

Ø32 mm · Ø39 mm · Ø42 mm · Ø56 mm · Ø70 mm · Ø90 mm · Ø135 mm · Ø200 mm

Product Description

18 Liter Halva, Tahini, Molasses and Jam Tin Pails AA

18 Liter Halva, Tahini, Molasses and Jam Tin Pails AA belongs to a metal packaging family considered for larger food filling volumes.

Kontensan offers this range within Halva, Tahini, Molasses and Jam Tin Cans, and Pails under Food Tin & Metal Packaging. The finished 18-liter product in the datasheet is code L088 and is specifically named a tahini and molasses container. Its suitability for halva or jam must therefore not be assumed from the category name alone.

Technical Features of the 18 Liter Tahini and Molasses Tin

The AA mold family lists a diameter of 232 mm, a length of 232 mm, a reference height of 85 mm and a capacity range of 4.5 to 21 liters. However, the finished L088 model is 350 mm high. It uses 0.30 mm sheet metal with gold lacquer on both inner and outer surfaces. The container has a 39 mm opening, a matching metal plug, a yellow plastic handle and a seamed body. The inner seam has powder lacquer, while the outside is lacquered. Its listed body shaping is the cheese-form type. The mold's 85 mm reference height is not the finished height of the 18-liter product.

Selecting Packaging for Halva, Tahini, Molasses and Jam

When buying empty tahini tins or wholesale molasses containers, producers should review product texture, filling temperature, closure design and food-contact compatibility together. Metal packaging may support transport and stacking, but actual performance depends on filling, sealing and shipping conditions. The AA mold family lists several sheet thicknesses, closures, handles and lacquer finishes. These are not all standard features of L088. For foods with different acidity, such as jam, the suitability of the contact surface must be confirmed separately.

Wholesale Metal Packaging, Printing and Orders

Wholesale halva tins and tahini or molasses packaging should be ordered with a clear finished product code, capacity, sheet thickness, closure, inner coating, handle and printing requirements. Kontensan's metal offset printing facilities can support branded designs in suitable configurations, but custom printing is not confirmed as a standard L088 feature. Buyers should compare offers with the same technical specifications rather than unit price alone. Export orders must also consider food packaging and labeling requirements in the destination country.

Frequently Asked Questions - FAQ

What is the finished height of the 18-liter AA tin?

The finished L088 product is 350 mm high. The 85 mm value is a reference dimension for the AA mold family.

Which closure is used on the 18-liter tahini and molasses tin?

L088 uses a 39 mm metal plug and a yellow plastic handle.

Can the AA tin also be used to package jam?

The L088 version is listed for tahini and molasses. Its coating and food-contact suitability for jam must be verified separately.
