Product Description

18 Liter Olive Oil Tin Can AA

18 Liter Olive Oil Tin Can AA is a metal packaging option for producers planning larger olive oil filling and transport operations. Kontensan offers this product within Olive Oil Tin Cans under Food Tin & Metal Packaging. When choosing olive oil tin packaging, buyers should check capacity, handling, closure size and the suitability of the surfaces that touch the oil. These details matter especially when purchasing empty olive oil tins wholesale.

Technical Features of the 18 Liter Olive Oil Tin

The AA mold family has a diameter and length of 232 mm, a reference height of 170 mm and a capacity range from 9 to 21 liters. However, the finished L118 18-liter version is 350 mm high. It uses 0.28 mm metal, a 42 mm opening, a 42 mm practical closure, a green plastic handle, a seamed body and an oil-shaped body design. The L118 record lists no inner, outer or seam coating. Family-level lacquer options must not be presented as standard on L118. Food-contact suitability for olive oil should be confirmed before ordering.

Choosing Closures and Coatings for Olive Oil Packaging

Metal olive oil containers can reduce the oil's exposure to light. Suitable closures, temperature and storage conditions are also important. The AA family includes 32 and 42 mm openings, several practical caps, vented options and different inner lacquer choices. These are possible mold-family configurations, not confirmed standard features of L118. Buyers of empty olive oil tins should check contact suitability, sealing performance and compatibility with their filling equipment.

Wholesale and Custom Printed Olive Oil Tins

Custom printed olive oil tins can support a brand's appearance on shelves and during distribution. Kontensan's metal offset printing equipment supports custom designs on suitable configurations. Printing is not listed as a confirmed standard finish for L118. When comparing an olive oil tin manufacturer or prices for an 18 liter olive oil tin, buyers should request the same metal thickness, closure, handle, coating, printing and order volume. Exporters should also check the food packaging requirements of their target markets.

Does an 18 Liter Olive Oil Tin Hold 18 Kilograms?

No. Eighteen liters describe the container's volume, not the oil's weight in kilograms. Actual weight depends on oil density and filling conditions. Producers should confirm net fill weight and headspace through a filling test.

Frequently Asked Questions - FAQ

How tall is the 18-liter olive oil tin?

The finished L118 model is 350 mm high. The AA mold's 170 mm figure is a general reference height.

Which closure does the 18-liter oil tin use?

The L118 version has a 42 mm practical closure and a green plastic handle.

Does the 18-liter tin have an internal lacquer?

The L118 entry lists no internal, external or seam coating. Food-contact suitability and any requested coating must be confirmed with the manufacturer before ordering.
