Product Description

19 Liter Halva-Tahini Tin Box YB

19 Liter Halva-Tahini Tin Box YB is a product name within the YB metal pail family designed for larger food filling volumes. Kontensan places this range in Halva, Tahini, Molasses and Jam Tin Cans, and Pails under Food Tin & Metal Packaging. For producers looking for high-volume tahini or molasses packaging, nominal capacity is not enough. The pail lid, carrying handle, sheet thickness and food-contact coating also matter. The YB capacity range includes 19 liters, but the finished product described in detail in the datasheet is the 14-liter L069 version. The confirmed specifications of L069 must therefore not be presented as standard features of a finished 19-liter pail.

Dimensions of the Large Halva-Tahini Metal Pail

The YB mold family has a listed diameter of 270 mm, a reference height of 150 mm and a capacity range from 8 to 26 liters. Its sheet metal options are 0.28 mm, 0.30 mm and 0.32 mm. These are general family specifications, not a verified finished height or standard thickness for the 19-liter version. The documented L069 tahini and molasses pail holds 14 liters, measures 250 mm high and uses 0.32 mm sheet metal. When ordering a 19-liter tin pail in bulk, buyers should confirm its finished height, product code and carrying requirements separately. The mold reference dimension is not a substitute for the dimensions used in shipping and storage plans.

Shaped Pail Lid, Carrying Handle and Reinforcing Rib

The YB family includes shaped and unshaped pail lids, a pail handle, and single or double reinforcing rib options. The finished L069 model has a shaped pail lid, a carrying handle and one reinforcing rib. Its body has a welded side seam, with powder lacquer on the inner seam and lacquer on the outer seam. Both the inside and outside surfaces have gold lacquer, and no separate opening is listed. Other family options should not automatically be treated as standard on a 19-liter product. Buyers should check lid performance during filling, stacking and transport. For heavy filled pails, the handle's suitability for the expected load should also be confirmed with the manufacturer.

Wholesale Tahini-Molasses Pails and Custom Printing

When comparing suppliers of empty metal halva containers or tahini pails, buyers should use the same specification for actual capacity, lid, sheet metal, inner coating and order quantity. Kontensan's metal offset printing facilities may support branded packaging in suitable configurations, but offset printing is not a confirmed standard feature of L069. Businesses buying wholesale molasses tins should review food-contact suitability against product ingredients and filling temperature. The final specifications of a 19-liter halva or tahini pail require a separate finished-product record. Suitability for other foods such as jam should not be assumed from the category name alone.

Frequently Asked Questions - FAQ

Is a finished 19-liter YB metal pail confirmed?

The YB mold family covers 8 to 26 liters, but the detailed finished product in the supplied datasheet is the 14-liter L069. Exact 19-liter specifications need separate confirmation.

What are the height and thickness of the L069 pail?

L069 holds 14 liters, has a finished height of 250 mm and uses 0.32 mm sheet metal.

Which lid and handle does L069 use?

L069 has a shaped pail lid, a carrying handle and one reinforcing rib. Its inner and outer surfaces are gold-lacquered.
