Product Description

5 Liter Olives and Pickles Tin Pails DA

5 Liter Olives and Pickles Tin Pails DA are metal packaging options for olive producers who need containers for filling, storage and transport. Kontensan offers this product within Olives, and Pickles Tin Cans under Food Tin & Metal Packaging. When choosing an empty olive tin, manufacturers should consider not only volume but also brine composition, internal coating and closure type. For acidic products such as pickles, food-contact suitability must be confirmed separately.

Technical Features of the 5 Liter Olive Tin

The DA mold datasheet lists a body diameter and length of 158 mm, a reference height of 38 mm and a capacity range of 1 to 6.8 liters. However, the finished L106 five-liter olive tin is 200 mm high. The L106 version uses 0.24 mm metal, gold lacquer inside and outside, and a seamed body. It has a 90 mm opening with a matching lacquered metal plug. The seam has powder lacquer protection inside and lacquer outside. This model has no handle or shaped reinforcement.

How Should the Inner Coating Be Selected for Brined Olives?

In brined olive packaging, salt content, acidity and storage time affect the choice of internal coating. The DA mold family lists metal thicknesses of 0.24, 0.25 and 0.28 mm, along with several lacquer and exterior finish options. These family-level choices are not all standard on the L106 product. Manufacturers looking for empty pickle tins should test whether the selected coating suits acidic foods before production. Food-contact suitability cannot be determined only by the container being made of metal.

Closures, Printing and Wholesale Olive Tin Supply

The DA mold range includes 90 mm metal plugs and 110 mm bonbon-style lids. The L106 five-liter version has a lacquered 90 mm metal plug. By comparison, the L341 four-liter version uses a 110 mm bonbon-style lid, and this feature must not be assigned to L106. Before ordering wholesale empty olive tins, buyers should confirm closure type, metal thickness, printing and quantity. Kontensan's offset printing facilities can support branded packaging on suitable products. Empty olive tin prices should be compared using identical technical specifications.

How Many Kilograms of Olives Fit in a 5 Liter Tin?

Five liters of volume do not mean that a container holds five kilograms of olives. Olive size, brine quantity and headspace affect total weight. Producers searching for a 5 kg olive tin should perform a sample filling test with the actual product.

Frequently Asked Questions - FAQ

What is the height of the five-liter olive tin?

The finished L106 five-liter olive tin is 200 mm high. The 38 mm figure is the general mold reference height.

Which closure does the 5 L olive tin use?

L106 has a 90 mm opening and matching lacquered metal plug. It has no handle.

Can the five-liter tin be used for pickles?

Its suitability for pickles depends on checking the internal coating against the product's salt and acid content before filling.
