Product Description

5 Liter Paint & Thinner Tin Can Can PA

5 Liter Paint & Thinner Tin Can Can PA is a wide-opening metal packaging solution with a carrying handle for paint manufacturers requiring five-liter containers. Kontensan offers this product in its Paint & Thinner Tin Can range under Industrial and Chemical Tin Cans, Pails, and Drums. The L398 model, specified for paint, has a height of 215 mm and a sheet metal thickness of 0.25 mm. With an enamel exterior, an unprofiled pail lid and a single body rib, it can be considered for professional paint packaging requirements.

5-Liter Metal Paint Pail and Body Design

The PA mold family has a reference diameter of 175 mm, a reference height of 150 mm and a capacity range of 3.5–7 liters. Sheet metal thicknesses of 0.24 mm and 0.25 mm are available for the welded body. The five-liter L398 model uses 0.25 mm sheet metal and has a finished body height of 215 mm. Its single body rib is a distinctive structural feature. The pail handle is part of its design for manual handling. When selecting empty paint pails, consider filling equipment dimensions, total weight after filling and shipping arrangements. A five-liter capacity does not mean a filling weight of five kilograms, regardless of product density.

Enamel Exterior and Unprofiled Pail Lid

The L398 model has an unprofiled pail lid with no separate filling opening. Its exterior has an enamel finish, while the inner surface and seam have no separate coating. The PA family lists different inner surface options, including pigment, gold, silver and clear lacquers, as well as lacquered and offset printed exterior finishes. When purchasing metal paint tins or pails with lids, closure performance and inner surface compatibility with the contents are important. The compatibility of this paint-specific model with each thinner formulation must be assessed separately. Required packaging tests and approvals for dangerous goods transport must also be verified.

Wholesale Paint Pail Manufacturing and Custom Printing

When working with metal paint container manufacturers, focus on technical specifications and brand identity as well as unit price. Kontensan has manufactured metal packaging since 1980. Its 25,000 square meters of indoor production space in Konya and Istanbul and metal offset printing lines support custom printed paint packaging in suitable configurations. Unlike the enamel exterior specified for L398, offset printing is a separate production choice. For wholesale empty paint cans and pails, capacity, sheet thickness, surface coating, print design and order quantity are key pricing factors. Share your technical requirements with Kontensan to request a manufacturing quotation for suitable packaging.

Frequently Asked Questions - FAQ

What is the sheet metal thickness of the 5-liter paint pail?

The L398 model uses 0.25 mm sheet metal and has a finished height of 215 mm.

Does the 5-liter metal paint pail have a handle?

Yes. L398 has a pail handle, an unprofiled lid and a single body rib.

Can empty paint tins be custom printed?

Metal offset printing can be considered in suitable configurations. Printing and coating specifications are agreed before ordering.
