Product Description

5 L Vegetable Oil Tin Can

The 5 L vegetable oil tin can is a compact metal package designed for the controlled filling, storage and sale of edible oils. Made by Kontensan, it belongs to the Food Tin & Metal Packaging category and the Vegetable Oil Tin Cans group. Its nominal 5-litre capacity

and 230 mm height offer a manageable format for retail, wholesale and export operations.

What Technical Structure Does the 5 L Oil Tin Have?

The 0.25 mm body and welded construction help the tin keep its shape from filling to shipment. The product row specifies no internal coating, external coating, seam coating, form or bead. It has a Ø129 mm filling opening and a Ø122 bonbon lid. As there is no carrying handle, carton, pallet and handling arrangements should be planned according to the filled product weight before ordering.

Where Can the 5 L Vegetable Oil Tin Be Used?

The 5 litre vegetable oil tin can may be considered for sunflower oil, olive oil and other edible oils. For producers seeking a 5 litre olive oil tin can, the metal body provides a light barrier and the compact size supports practical distribution. However, the suitability of the uncoated internal surface for direct contact must be confirmed according to oil acidity, filling temperature, target shelf life and food-contact rules in the destination market.

Clear Brand Visibility on Metal Packaging

An oil tin is not only a protective container; it carries the brand's quality message on the shelf. Kontensan combines manufacturing experience since 1980 with metal offset printing capacity. Printed olive oil tin can projects can be evaluated under suitable order conditions. Colours, graphic areas and exterior applications can match the brand identity, bringing technical requirements and strong product presentation into one wholesale packaging plan.

Before ordering, buyers should review annual quantity, filling line, lid-closing method, carton and pallet layout, print expectations and destination-market standards together. This technical check reduces incorrect packaging choices, filling-line incompatibility and expensive revisions later.

Frequently Asked Questions - FAQ

How much oil does the 5 L vegetable oil tin hold?

Its nominal capacity is 5 litres. Net fill quantity depends on oil density, filling temperature, required headspace and the producer's filling standard.

Can this tin be used for olive oil?

Yes, if the suitability of the uncoated internal surface for direct oil contact is technically confirmed. Oil properties, shelf life and destination-market rules must be assessed together.

Can the 5 L oil tin be printed?

Metal offset printing may be evaluated under suitable project and order conditions. Print area, colours, surface preparation and minimum order quantity are confirmed during quotation.

Does the product have a carrying handle?

No. The technical sheet states that this product has no handle or hinge. Handling and pallet planning should reflect this structure.
