5 Liter Welded-side-seam Halva-Tahini Tin Box DA

DA

Technical Specifications

Mold Code	DA
Diameter	158
Length	158
Height	38
Volume	0.9 - 6.8 lt

Applicable Features

Kalınlık

0,24 mm · 0,25 mm · 0,28 mm

İç Kaplama

Silverlaklı · Gold Laklı · Puntalık Laklı · Çift Laklı · Pigment Laklı · Pigment Lak+Laklı · Çift Pigment Laklı · Krem Emaye Laklı · Bej Laklı · Şeffaf Laklı · Krem Laklı · Dekoratif Gold Laklı · Gri Laklı · Yok

Dış Kaplama

Silverlaklı · Gold Laklı · Emaye · Çift Laklı · Ofset Baskılı · Şeffaf Laklı · Dekoratif Gold Laklı · Yok

Delik

Ø39 mm

Kapak

Düz 40 mm Kulaklı · Düz 41 mm · Ø39 Metal Tapa

Kulp / Menteşe

Product Description

5 Liter Welded-side-seam Halva-Tahini Tin Box DA

5 Liter Welded-side-seam Halva-Tahini Tin Box DA belongs to a metal packaging family considered for larger tahini and molasses filling volumes. Kontensan offers this model within Halva, Tahini, Molasses and Jam Tin Cans, and Pails under Food Tin & Metal Packaging. The finished five-liter product is identified as L044 and named a tahini and molasses container in the datasheet. Buyers should not assume that it is suitable for halva or jam only because these foods share a category. Wholesale orders should use the verified finished product code.

Technical Features of the Five-Liter Tahini and Molasses Tin

The DA mold family lists a diameter and length of 158 mm, a reference height of 38 mm and a capacity range from 0.9 to 6.8 liters. However, the finished L044 version is 218 mm high. It holds five liters and uses 0.24 mm sheet metal with gold lacquer inside and outside. The body has a welded side seam, a 39 mm opening and a matching metal plug. A yellow plastic handle is included. The inner seam has powder lacquer, while the outer seam is lacquered. No decorative ribbing or body shaping is listed for L044. The 38 mm mold reference is not its finished height.

Metal Plug, Plastic Handle and Inner Coating

When sourcing empty tahini tins or wholesale molasses containers, buyers should review the closure, inner lacquer and handling needs together. The metal plug and plastic handle are confirmed features of L044. The wider DA mold family can offer other colors, metal thicknesses, closures, seam coatings and decorative ribbing. These alternatives are not automatically standard on L044. Food-contact suitability and sealing performance should be verified against the filling temperature, ingredients and storage conditions of tahini and molasses. Suitability for halva and jam requires separate assessment.

Wholesale Halva-Tahini Tins and Custom Printing

A wholesale halva or tahini packaging quotation should clearly state the capacity, finished 218 mm height, metal thickness, closure, inner lacquer and quantity. Kontensan's metal offset printing facilities may support branded designs on suitable configurations, but custom printing is not a documented standard feature of L044. Buyers comparing metal halva tin manufacturers should assess equivalent specifications rather than price alone. Export orders must also consider food packaging and labeling requirements in the destination market.

Frequently Asked Questions - FAQ

What is the finished height of the five-liter DA container?

The finished L044 version is 218 mm high. The DA family's 38 mm figure is a mold reference.

Which closure does the five-liter tahini and molasses tin use?

L044 has a 39 mm opening, a matching metal plug and a yellow plastic handle.

Can the L044 container also be used for halva or jam?

The datasheet lists L044 for tahini and molasses. Inner coating and filling suitability for other foods must be confirmed separately.
