Product Description

Ø65 Mineral Oil Tin Cans JA
Ø65 Mineral Oil Tin Cans JA is a small-volume metal packaging family with a 65 mm diameter for mineral oils and industrial lubricants. Kontensan offers the product within Mineral Oil Tin Cans under Industrial and Chemical Tin Cans, Pails, and Drums.

The JA mold family covers capacities from 0.1 to 0.7 liters. The documented 500 ml L657 mineral oil container has a finished height of 155 mm, 0.24 mm sheet metal and an easy-open aluminum lid. Its welded body has no handle. This configuration gives manufacturers a specific option to consider when packaging small amounts of lubricant.

Dimensions and Sheet Thickness of 65 mm Mineral Oil Containers

The JA family has a diameter of 65 mm, a stated height range of 36–224 mm and a capacity range of 0.1–0.7 liters. Available sheet metal thicknesses are 0.22 mm, 0.24 mm and 0.25 mm. The finished L657 model is 155 mm high and uses 0.24 mm sheet metal. Its welded body has no carrying handle, additional shaping or ribbing. When ordering empty mineral oil containers, do not confuse the mold family's height range with the dimensions of a finished product. Filling line clearance, shipping cartons and shelf arrangements should be planned around the actual container height. Filled weight also depends on the density of the lubricant and is not determined by capacity in liters alone.

Easy-Open Aluminum Lid and Alternative Closures

The 500 ml L657 model features an easy-open aluminum lid. No separate 32 mm filling opening, Pratik closure or vented closure is specified for this model. Those are alternatives available within the JA family. The family also includes Pratik 32 mm closures, vented Pratik 32 mm closures and open-top configurations. L657 has no coating on its inner surface, outer surface or seam. The family offers further options such as silver, gold, pigment and clear inner lacquers, as well as enamel and offset printed exterior finishes. These must not be presented as standard features of L657. Chemical compatibility with motor oil or other lubricants, together with any required leak tests, should be confirmed separately.

Wholesale Mineral Oil Packaging and Custom Printing

For brands working with mineral oil packaging manufacturers, closure design, printing and reliable supply matter alongside capacity. Kontensan has manufactured metal packaging since 1980. Its facilities in Konya and Istanbul have a combined indoor production area of 25,000 square meters. Metal offset printing equipment supports custom printed lubricant packaging requests in suitable configurations. The company exports to more than 30 countries. Prices for wholesale empty motor oil cans may vary with sheet thickness, closure system, surface treatment, printing scope and order quantity. To obtain a suitable production quotation, share the lubricant's technical characteristics, required capacity, closure needs and artwork together.

Frequently Asked Questions - FAQ

What capacities are available for 65 mm mineral oil containers?

The JA mold family covers 0.1–0.7 liters. Finished dimensions depend on the selected capacity.

What are the height and sheet thickness of the 500 ml model?

The finished L657 model is 155 mm high and uses 0.24 mm sheet metal.

Which lid does the 500 ml mineral oil container use?

L657 has an easy-open aluminum lid. The Pratik 32 mm closure is a separate family-level option.
